

Stitchfolding

Stitchfolding is a method for fastener-less assembly of light gauge metal sheets and light profiles.

One or two punches, depending on model, cut out tabs from the overlapping material and these tabs are then folded back by a folder to form a staple-like joint.

Article numbers

84 10246 TAGGER 320, complete with workhead, including tool kit, handle, hose and booster, ready to be connected to a source of dry and clean compressed air at 6 bar, 87 psi
